Chemistry: Chemical Bonding Activity Introduction When atoms bond together to form ionic compounds, they will not combine with just any other atom. For example, two atoms that will never form an ionic bond are a sodium atom (Na) and a potassium atom (K). This is because both  $\text{Na}^{1+}$  and  $\text{K}^{1+}$  are cations, or positively-charged ions.

I start this activity by explaining that there are several chemical formulas at the top of the page and give them a brief tutorial of how to read chemical equations. Up to this point we have not discussed how to read chemical formulas, but students should come into chemistry with a basic understanding based on previous science classes and MS-PS1-1.
