The analysis phase of the IT project life cycle produces the detailed requirements and system architecture specifications for a project. Most importantly, it establishes what the end user wants the system to do. During this phase, models of the application are developed.

Key Activities of the Project Analysis Phase

Systems design is the process of defining the architecture, modules, interfaces, and data for a system to satisfy specified requirements. Systems design could be seen as the application of systems theory to product development. There is some overlap with the disciplines of systems analysis, systems architecture and systems engineering.
